

The Centre is in a hospital with a modern imaging service including Ct Scan, MRI, laboratory, emergency service, in service 24 hours a day. The hospital cooperates with and receives support from the university hospitals of the Basel .

Our patients, who undergo rehabilitation in a very peaceful and pleasant environment, first pass through an assessment stage and are then directed to the necessary treatment.

In addition to our usual rehabilitation programs ,we work together with the nephrology and hemodialysis department located in the same building to take care of patients who need rehabilitation and dialysis in optimal conditions. We also collaborate with our oncology department for rehabilitation of patients with oncologic problems.

During the rehabilitation period, the entire team is in direct contact with the patient and his/her relatives, informing the patient at every stage, while developments are regularly measured. All types of support needed for our patients to go back to their normal lives in the best possible manner starts from the first day.

The objective of the entire team is **giving our patients the best treatment**. For your inquiries, you may contact the following persons or reach us through our website.

## REHABILITATION CENTRE

## HOPITAL DU JURA SWITZERLAND

The rehabilitation centre, opened for service in 2012, is located in Porrentruy, Switzerland. Porrentruy is a lovely, small town between Basel and Bern, in the canton of Jura, near the French border and Germany.

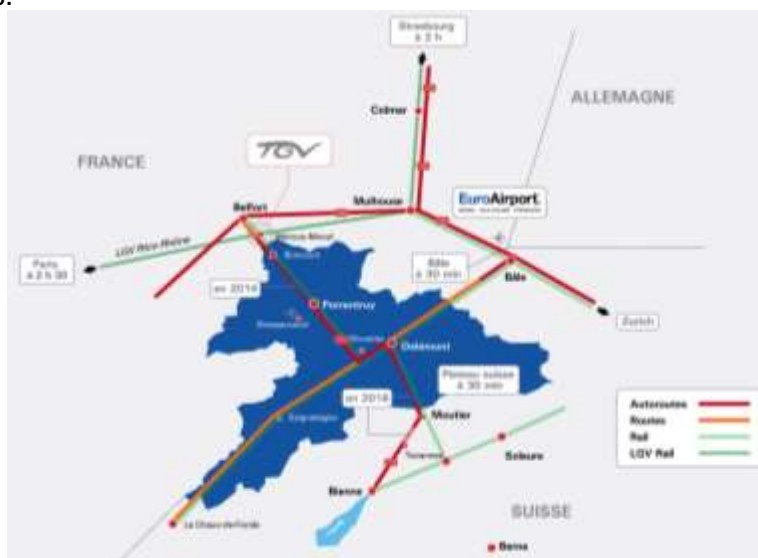

The quality of life is high in the town and all types of accommodation and other amenities are available.

In terms of transport, the town is 1 hour away from the Basel-Mulhouse European airport, an international airport with direct flight connections to many cities around the world. The town is 20 minutes away from Belfort Montbéliard high-speed railway station; Paris is reached in 2 hours and 15 minutes and Zurich in 1.5 hours by train. An aerodrome is also in the vicinity of the hospital.

We naturally guarantee a great discretion and the medical secret with our patients.

The Rehabilitation Centre of the hospital du Jura is the most important rehabilitation centre in the Canton, serving in particular those patients with neurological problems, oncologic problems and those with orthopaedic problems.

The Centre's specialities in rehabilitation may be listed as follows: post-stroke and post traumatic brain injury rehabilitation, MS rehabilitation, gait rehabilitation in Parkinson disease, rehabilitation after spinal cord and diseases, chronic musculoskeletal pain, rheumatic diseases, and post-orthopaedic surgery rehabilitation, oncologic rehabilitation and paediatric rehabilitation

Our Centre, which has a very large number of treatment staff per patient, has a team including specialist doctors in Rehabilitation, Neurology, Rheumatology, Orthopaedics, and Neurosurgery, in addition to the following team members: Physiotherapists, occupational therapists, speech therapists, neuro psychologist, rehabilitation nurses, care givers, social workers and dieticians.

Our interdisciplinary team also receives support from all the facilities and specialists at the Jura hospitals.
